FOR IMMEDIATE RELEASE

New Product Determines Asphaltene Precipitation Point Via Spectroscopy

Gaithersburg, MD 8/15/2013

It is now easier to determine the onset of asphaltene precipitation in crude oil, thanks to the latest edition to LT Industries' oil analysis product line.

The **Parafuel™ Asphaltene Precipitation Analyzer** is a versatile, non-destructive spectroscopic analysis tool that is specially designed for measurements in crude oil. It provides quick, easy and accurate determination of the asphaltene precipitation/deposition point for crude stock or blends. The analysis is automated, and the device may be operated simply by pressing a single button.

Results are logged and displayed graphically on the software module, which is compatible with all Windows platforms. The device may be used in laboratory, plant or field settings, with appropriate enclosures and measuring probes designed for harsh environments.

Knowledge of the asphaltene precipitation point is critical in the prevention of asphaltene deposition, which can clog wells, pipes, and equipment—leading to downtime and cleaning costs. Through better knowledge and control of the precipitation point, crude oil blending processes can be optimized and downtime may be reduced.

More product information can be found at:
