FOR IMMEDIATE RELEASE

LT Industries NIR Analyzers Improve Beer Production and Quality

Gaithersburg, MD 1/30/14

LT Industries has introduced an analyzer designed to provide improved product analysis and quality control for Beer Breweries.

The IsoChem Complete Beer Analyzer draws on LT Industries' years of experience developing quality control solutions for the Beverage Industry. It can provide key beer properties such as Alcohol, Original Gravity, Calories, Sugars, Apparent and Real Extract and more. The optical measurement technique measures all properties in a single scan that takes seconds. Results are displayed on a customized user interface and can be logged or printed as necessary.

The IsoChem system also provides a path to upgrade to online beer measurements. Online monitoring can help breweries reduce waste during product switchovers and continuously monitor quality. Users can take advantage of the ability to measure 20 process points, communication to control systems via Modbus and other standard protocols and washdown process enclosures.

More information can be found at: <http://www.ltindustries.com/appsbeer>

For over 30 years, LT Industries has been a manufacturer of process and laboratory analyzers for the beverage, food, oil, fuels, pharmaceutical, and chemical industries. The company's analyzers, probes, fiber optics and software are part of a complete analysis solution that is tailored to customers' specific measurement needs.
